

UPRIGHT STEEL COVERS

Upright steel well covers protect the borehole and allow the location of the borehole to be easily identified.

The top cover plate is held by a welded pin and allows rotation through 360-degrees enabling access to the protected monitoring pipe. The lid also provides a platform for a dip meter or gas monitor to be rested upon.

These lockable covers are designed to be set in concrete up to or over the initial "D" measurement to seal the base and protect the well from vandalism and ground water ingress.

- High visibility
- Lockable

Applications: • Groundwater monitoring wells • Well security

Part No.	Dimensions (mm)				
Part No	A	B	C	D	E
